In the Claims:

Please amend the following claim:

3. (Amended) A system for wireless networking, comprising:

AX a remote terminal unit;

means for creating a transmission protocol with an Internet Protocol for the

remote unit; and

means for sending the created protocol.

Please add the following new claims:

5. A system for wireless networking to communicate with remote terminals,

comprising:

AZ a protocol conversion module for converting time discrete input information to

information formatted for sending to remote terminals in data packets;

a router module for internally routing said data packets;

said protocol conversion module for converting the time discrete input information

into an Internet Protocol base protocol;

a wireless protocol module for creating links to the remote terminals;
a wireless device interface module for providing wireless transceiver interfacing; and
at least one transceiver for responding to said interface module for sending information wirelessly to remote terminals.

6. A system according to claim 1, wherein said protocol conversion module converts the instrumentation time discrete information in an IP * GAS1d protocol.

7. A method for wirelessly networking to communicate with remote terminals, comprising:

AN
converting time discrete input information to information formatted for sending to remote terminals in data packets;

internally routing said data packets;

converting the time discrete input information into Internet Protocol base protocol;

creating links wirelessly to the remote terminals;

interfacing the links; and

sending information wirelessly to remote terminals via said links.
